POMFRET CENTER, CONN.

USE TELEPHONES UNDER THEIR NAMES

INTRODUCTION

The name "Hiti" signifies high elevation, which gives a longer season, free from early frost and injury to late growth.

This catalog contains only a list of plants grown at Hiti Nursery, *but stock of all kinds is furnished. Prospective buyers are invited to call at or write to the Boston office and discuss their wants. Mr. Roland E. Baker will attend to all direct Nursery customers.*

The Nursery, on Dana Road, is about a mile by road from Pomfret Station of the N. Y., N. H. & H. R. R., or a shorter cut up the railroad track. Telephone or telegraph Mr. Baker the day previous to your coming and he will meet you at the station on arrival, taking you back when ready. This enables you to carry home any little purchase made, without additional expense, or delay. Visitors to the Nursery between April 1st and November 1st will find some one at hand during business hours to show the stock and take orders. Large specimen trees can be seen on property near by, showing the beauties of their older growth.

In these days of automobile travel customers find it easy to visit Pomfret and *select their plants personally.* In this way they see for the first time perhaps some handsome new things that are just what are wanted for certain effects or uses. If they come prepared, the plants can generally be dug at once and taken away with them, thus saving time, cost in packing and transportation, besides affording the plants themselves only a slight shock in their removal. We strongly advise this course whenever practicable. Spring is usually the *best* time to handle Nursery stock but the season for many plants may be extended by a little care to include the summer and fall months also; with but slight risk of failure.

The Nursery is closed during the winter months, though of course it is open to inspection at any time. The whole area embraces only about eight or ten acres, on which are two small buildings used as tool and packing houses. *All plants are thus taken up near at hand and can be quickly packed without loss of time or injury from root exposure, a very great advantage to purchasers. The roots are packed in fresh sphagnum moss, which is a great benefit and safeguard if delayed in transit.*

Large sized stock in quantity can be delivered economically by auto as far as Boston to arrive in perfect condition.

All deliveries f. o. b. carefully put up: *packing at cost.*

Terms cash, unless otherwise agreed upon.

JAMES H. BOWDITCH, Proprietor,

73 Tremont St., Room 903, Boston, Mass.

CONN.

No. 608.

Date—AUGUST 23, 1928.

CONNECTICUT AGRICULTURAL EXPERIMENT
STATION
NURSERY INSPECTION AND REGISTRATION

Certificate

This is to certify that Hiti Nurseries of Pomfret Center, Conn., has registered as a Nurseryman, that the nursery stock has been duly examined in compliance with the provisions of Chapter 265, of the Public Acts of 1925, and that it is apparently free from dangerously injurious insects and plant diseases.

This certificate expires August 1, 1929.

W. E. BRITTON,

State Entomologist.

INVITATION

The public is cordially invited to come to the Nursery at any time as a *visitor* merely, not a buyer.

We make this offer unhesitatingly because it is the best way of introducing ourselves and our plants.

In point of fact each new acquaintance affords us the best advertising medium for attracting the attention of others.

EVERGREENS.

A seedling from this Nursery.

Golden Evergreens usually show this color most distinctly in spring and early summer, on the new growth.

This Spruce, on the contrary, is at its best during cold autumn and winter weather, and is therefore unique in its field of light yellow color.

		Each

We believe this to be the best *blue type* on the market today among the entire evergreen group. A product of this Nursery. Carefully grown from *cuttings only*, so as to insure the best results.

Stocky, well-furnished specimens.

Plant on an open sunny lawn where it will have full chance for development.

Always keep it in *open soil* extending at least one foot outside the spread of the lower branches. This insures protection of these latter against injury from the lawn mower, besides giving a better base or setting for the tree itself.

The Japanese Yews (*T. cuspidata*) are of exceptional hardiness, good coloring, and generally speaking, by far the most satisfactory of the entire Yew family; and we therefore confidently recommend their broad use for many purposes.

The handsomest forms have been carefully selected and stock of these grown from outdoor cuttings so that the result is sure and exact. We urge prospective customers, or simple visitors, to inspect these young plants and see for themselves their intrinsic beauties. If, however, distance or inconvenience interfere with personal selection, we will gladly make this choice for you if a general statement of planting conditions are given us as a guide to a wise furnishing of what is really needed.

Many old customers living at a distance request us to forward to them from time to time any new or desirable things that we have come across in our Landscape work.

		Each
10	Thuja Koraiensis, 15 to 18 in.	\$1.25

9	" " " " 18 to 24 in..	2.50
500	Yucca filamentosa.15

We have a considerable number of large size Specimen Evergreens, mostly Yews, that it is almost impossible to catalog, so as to afford an adequate description.

These are priced to the visitor on examination at the Nursery, and we find them very useful for adding a last touch of beauty to any landscape finish.

Also a good sized assortment of new varieties that are of smaller size (mostly held for another year's growth), that we shall be glad to show, and thus introduce them to your notice in advance, for later adoption.

It will be well worth your while to see these.

Always plan to have your garden *at its best*, when you are most likely to be there to enjoy it.

TREATMENT

Plans for large areas or places are designed and carried out by a landscape engineer of recognized ability, so that no customer need feel that his particular want cannot be wisely and economically treated.

Sometimes a simple visit of inspection will afford sufficient data for a customer to attend to the affair himself, and the mere removal of overgrown or unsightly trees and shrubbery on an old place will work wonders in rehabilitation. By all means consider this phase of the situation carefully, as we always wish to bring out or advise the best and wisest course under varying circumstances.

RECOMMENDATION

Some customers would like a little advice or suggestion as to what plants to use or order from the Nursery, and we wish to provide for this.

For example—there are quite a number of varieties, especially among the evergreen group, that are new and desirable for small places or gardens and if the selection is left largely in our hands we are confident the result will be much more satisfactory. Evergreens of small size should be used in all instances where immediate effects are not imperative.

Again in orders out of the State the red tape of inspection and even entire prohibition often makes for provoking delay and even cancellation, so that we have to be careful even of our promises, as changes in these laws and regulations occur every season and have to be recognized accordingly.

We particularly aim at a hardy selection of pleasing variety.

Set the plants out, if you like, in Nursery form at first—i. e. in rows or beds and see how they look to you. They can be moved easily a year or two later, where finally wanted.

CONCLUSION

It is sometimes asked why we do not publish a full descriptive Catalogue. Our reply is that the Nursery is small; intended mainly to supply the immediate needs of the proprietor and his personal customers, and we find that there are comparatively few people, as purchasers, who do not know or cannot find out what the list offers through the ordinary botanic names, and we are willing always to explain further to those who are in doubt about anything.

Among our regular customers are included today house architects, engineers, and nurserymen who desire prompt attention, choice stock, and the most careful handling and packing: i. e., reliable service.

LANDSCAPE GARDENING

Large or small country places are carefully treated with reference to outdoor improvement.

Gardens of all kinds made to fit any condition offered.

Combination fruit and flower designs are often very useful and effective, where space is more or less limited and good cultivation easily maintained.

JAMES H. BOWDITCH.
